Barr's 'Pure' Grass Seeds

Produce Beautiful Smooth Lawns, Tennis Courts, Cricket and Croquet Grounds, Bowling Greens, Public Parks, Pleasure Grounds, &c.

In laying down New Lawns, sow at the rate of 80 lb. per acre; but if a thick sward is required quickly, sow 100 lb. or even more Seed per acre. To renovate Old Lawns, sow 20 lb. to 30 lb. per acre.

In sowing Grass Seeds always take advantage of rainy or damp weather, and after sowing give a slight covering of clean and finely-riddled soil; this, followed by rolling when the soil is in a sufficiently dry condition *not* to adhere to the roller, will ensure a successful vegetation. After this, by frequently cutting and constantly rolling, a fine smooth Lawn will be secured.

To ensure a fine Lawn it is important that the soil to be sown should be quite clean—that is, free from the seeds of objectionable plants—and Grass Seeds used should consist solely of the fine-leaved dwarf-growing Grasses. Our **New Mixture of Dwarf Grasses** meets this; it is thoroughly cleaned, and consists solely of fine-leaved dwarf-growing Grasses. Our other mixtures of Grasses are as carefully cleaned, and will meet all the requirements for which they are offered. If newly-sown Lawns have not been thoroughly freed from the seeds of weeds or Coarse Grasses previous to sowing, these will appear with the newly-sown seeds, or even before the slower-growing fine-leaved Lawn Grasses; in such cases weeding must be done at once, or serious injury to newly-laid-down Lawns will be the result.

Sow at any time from beginning of April to the end of September, *except when the weather is hot and the earth dry.* **Lawns, Cricket and Tennis Grounds,** which have been much used in summer, should in autumn always be attended to, by filling up holes, and levelling where necessary, and then a general renovating of the surface by covering it with a quarter-inch of *clean soil*; on this a liberal sowing of *clean dwarf-growing Grasses*, followed by occasional rollings, will secure a fine close sward, in all respects perfect for the following year's play. When a dressing of soil is not given the surface soil, all bare places should be loosened with the rake before sowing the Grass Seed.

The Seeds of the various Grasses of which the following mixtures are composed have all been thoroughly cleaned and afterwards carefully mixed, and as the mixtures contain **no Coarse Grasses** they cannot fail to give the most satisfactory results. Clover is not added unless requested, as it is not a desirable plant for a good Lawn; there are, however, soils where the addition of Clover is a benefit, and in such cases a very small quantity of the best White Dutch Clover Seed (3 to 4 lb. to the 100 lb. of Lawn Grass) may be incorporated with the Grasses.

The Seed is sold by weight, being the only correct method of estimating quantity needed for a given space.

Barr's 'Thames Embankment' Grass Seeds for Parks, Golf Links, Cricket Grounds and Bowling Greens.—A special mixture, which has been found very successful on the Thames Embankment, and in the formation and renovation of many public and private parks and squares around London and throughout the country. *Sow 60 lb. per acre, or 6 oz. per rod (30¼ square yards), if the ground is required to be covered quickly; and for renovating bald patches or where the grass is thin or poor, especially after a summer's hard wear and under trees, sow 20 to 30 lb. per acre.* **Per lb., 1s. 3d.; per 10 lb., 10s. 6d.; per 20 lb., 20s.; per 56 lb. and upwards at the rate of 11d. per lb.**

Barr's 'Standard' Grass Seeds for Garden Lawns, Tennis Courts &o.—In this mixture there is a larger quantity of dwarf, fine-leaved Grasses than in Barr's 'Thames Embankment;' *sow 70 lb. per acre, or 7 oz. per rod (30¼ square yards), if the ground is to be covered quickly; and for renovating bald patches or where the ground is thin or poor, especially after a summer's hard wear and under trees, sow 20 to 30 lb. per acre.* **Per lb., 1s. 6d.; per 10 lb., 12s. 6d.; per 20 lb., 22s. 6d.; per 56 lb. and upwards, 1s. 1d. per lb.**

Barr's New Mixture of Dwarf Grasses for producing an Extra Fine Smooth Lawn.—A special mixture of the finest leaved and dwarfest growing Grasses, producing an *extra fine velvety turf*, and saving labour in not requiring frequent mowing. *Sow 80 lb. per acre, or 8 oz. per rod (30¼ square yards), if the ground is required to be covered quickly; and for renovating bald patches or where the grass is thin or poor, especially after a summer's hard wear, and under trees, sow 20 to 30 lb. per acre.* **Per lb., 2s.; per 10 lb., 18s.; per 20 lb., 34s.; per 56 lb. and upwards, 1s. 6d. per lb.**

Dutch Clover, Finest White.—*No Clover is included in above Mixtures of Grasses, as we consider a lawn should consist of Grass alone.* If Clover is desired, however, it may be added to the Grass Seeds at the rate of 3 to 5 lb. per acre; but it is preferable to sow the Clover separately from the Grass Seed. **Per lb., 1s. 6d.**

Permanent Pasture Grasses and Clovers in Mixture. **Specially Cleaned.**

For Heavy, Medium, or Light Meadows or Pastures, price for quantity per acre, 30*s.* and 40*s.*, according to quality.

TO GET RID OF WEEDS ON LAWNS use

Watson's Lawn Sand (The Weed Destroyer).

Watson's Lawn Sand is a light grey dry powder, possessing the remarkable property of destroying Daisies, Plantains, Dandelions, and suchlike Weeds on Lawns, Cricket Grounds, and Bowling Greens; while at the same time it acts as a fertiliser to the Grass, enriching the colour and thickening the sward. An annual application of the 'Lawn Sand' in spring destroys the seedling Weeds, and invigorates the Grass, and to some extent prevents the discolouring of the Grass during hot dry weather.

Watson's Lawn Sand is well spoken of by those who have used it, and one of the best testimonies of its appreciation is the increasing annual demand. A few years back there was a good deal of correspondence in *The Field* on this preparation, and the writers strongly recommended its use on lawns for destroying weeds and producing a close turf.

Watson's Lawn Sand is clean, easy of application, and inodorous.

For fuller Particulars see Circular, free on application.

QUANTITY REQUIRED.—To destroy Daisies, 3½ oz. to 4 oz. to the square yard in dry weather; 6 to 7 oz. to the square yard in wet weather.

PRICES.—34*s.* per cwt., including casks; per 56 lb. keg, 18*s.*; 28 lb. tins, 9*s.* 6*d.* Sample Canisters, 1*s.*, 2*s.* 6*d.*, and 5*s.* 6*d.*

The best Manure for Lawns is BARR'S PHYTOBROMA. *See page* 17.

A FEW BEAUTIFUL

Summer and Autumn Flowers.

BULBS AND TUBERS FOR WINTER AND SPRING PLANTING.

	per doz.	each
	s. d.	*s. d.*

Abobra viridiflora, an elegant half-hardy perennial, *scarlet-fruited* climber for sunny trellises, arbours, &c.; store the tubers in dry sand or soil in a cool place away from frost, and plant out when mild enough in spring ..... 5 6 ... 0 6

Achimenes, these make charming pot plants for a cool greenhouse, and are very decorative with their brilliantly coloured elegant flowers; plant 3 roots in a 4½ inch pot, in light sandy soil, and start in a gentle bottom heat.

12 beautiful varieties, 1 root each, 3*s.* 6*d.*; 3 roots each, 12 varieties, 8*s.* 6*d.*

Achimene tubiflora (*syn.* **Dolichodeira**), a valuable pot-plant for greenhouse, bearing trusses of long tubular white flowers of a delicious and powerful scent ..... 4 6 ... 0 5

Agapanthus (African Lily), valuable pot-plants for the greenhouse, and when grown in tubs on terrace walks and lawns, or planted out by streams, lakes, and ponds, few plants are so effective. During severe winters they should be covered, or in very cold climates be taken indoors until Spring, water being given only sparingly. This plant is a gross feeder, and likes a rich soil and plenty of moisture while in growth.

umbellatus, handsome umbels of *rich blue* flowers ..... 7 6 ... 0 9

,, **flore pleno**, a very handsome variety, with fine double *blue* flowers ..... — ... 2 0

,, **maximus**, bearing umbels of large *rich blue* flowers, very handsome ..... — ... 1 3

,, **albus**, handsome umbels of *white* flowers ..... — ... 1 6

,, **Mooreanus**, small *blue* flowers in graceful umbels ..... 7 6 ... 0 9

Albuca, decorative greenhouse Cape bulbs, which may also be planted out under a south wall.

canaliculata, producing handsome trusses of very fragrant *golden-yellow* flowers, 1½ ft. ..... — ... 2 6

fastigiata, produces handsome trusses of *white* and *green* flowers, 1½ ft. ..... 4 6 ... 0 5

Nelsoni, a lovely species, bearing in June noble spikes of almond-scented flowers, *pure white* with slight *brown* stripe, 3 ft. ..... 7 6 ... 0 8

Alocasia odora, a grand foliage plant for greenhouse decoration or sub-tropical work in summer, 3 ft. ..... — ... 2 6

Alströmeria. These beautiful '**Peruvian Lilies**' are very easy to cultivate, and produce in Summer abundance of charming flowers valued for cutting, as they last long in water. Their showy and attractive colours render them most valuable border plants. Plant so that the top is four inches below the surface, selecting by preference a situation close to a wall or hedge, and protecting, the first winter, with leaves or litter. **A. pelegrina** varieties and **A. pulchra** are more tender, and delight in hot, dry, sunny situations, such as under a south wall; they are also fine plants for a cool greenhouse.

aurantiaca, flowers rich *orange*, spotted *carmine*, very showy, 3 ft. ..... per 100, 12*s.* 6*d.* 1 9 ... 0 2

chilensis hybrida, mixed, beautiful shades of *rose*, *crimson*, *orange*, *yellow*, *buff*, and *blush*, with *yellow* and *crimson* markings, valuable as cut flowers ..... per 100, 12*s.* 6*d.* 1 9 ... 0 2

lutea, bright *yellow* flowers with *carmine* spotting, very pretty, 3 ft. ..... ,, 10*s.* 6*d.* 1 6 ... 0 2

pelegrina alba, *white*, very chaste and beautiful flowers } Grow under a south wall or in } 5 6 ... 0 6

,, **rosea**, *rose-coloured* flowers, beautifully spotted } frames. } 4 6 ... 0 5

psittacina (The Parrot Flower), *bright crimson* flowers splashed *green* and *mahogany*, 3 ft. per 100, 12*s.* 6*d.* 1 9 ... 0 2

pulchra (tricolor), *white* and *yellow* flowers, striped and blotched *crimson* ..... 3 6 ... 0 4

AMARYLLIS FORMOSISSIMA (JACOBEA LILY).

Amaryllis, Barr's Choice Unnamed Hybrids, Flowering Bulbs, for pot-culture in greenhouse; purchasers are sure to be satisfied with the flowers, and have a good chance of getting new varieties of exceptional beauty 21 0 ... 2 0

Amaryllis

belladouna (The Belladonna Lily), bearing umbels of beautiful large *white* flowers flushed and tipped *soft rose*. If planted in light soil against a south wall it will establish itself and bloom freely every year ..... 6 6 ... 0 8

formosissima (The Jacobea Lily), *dark crimson* 4 0 ... 0 5

,, ,, **glauca**, *crimson-scarlet* 4 0 ... 0 5

These **Jacobea Lilies** have large quaintly shaped handsome flowers; they may be planted outdoors in a hot sunny situation in April, or be potted up earlier.

Amianthium muscætoxicum (Fly Poison), an interesting North American Liliaceous plant, bearing in May a dense raceme of *creamy white* flowers, 1½ ft.; it likes a moist soil and slight protection in winter ..... 8 6 ... 0 9

p. doz. each

Amorphophallus, curious and ornamental bulbous plants from the tropics, interesting as pot plants and valuable for sub-tropical bedding. The tubers should be kept dry and away from frost during winter, and planted outdoors March to April, 4 inches deep, or, if for indoor decoration, be potted earlier. *s. d. s. d.*

campanulatus, a very curious species, flowers very large, *dark red* and *black*, and produced close to the ground ..... — ...1 6

Rivieri (Umbrella Arum), a very handsome plant, with large palm-like leaves 2 to 3 ft. in diameter, on a *white-spotted* stem; a charming pot plant for a room.....*strong* tubers 10 6...1 0

Anemone or Windflower.

For brilliancy of colour few flowers can compare with the **Anemone**, which in spring produces its masses of bloom in endless variety of shades, *scarlets, crimsons, roses, blushes, lilacs, blues, purples*, and *white*, all of which for cutting are valuable, lasting long in water. For beds, edgings, and masses in the borders it is matchless, and may be had in bloom, weather permitting, from November to July, according to situation, locality, and time of planting.

CULTURE.—Any good, richly manured soil suits the Anemone. Plant in succession from October to May, the roots four to six inches apart, at a depth of two to three inches, choosing a dry day, and when the ground is in good working condition. In cold, bleak, or low-lying districts it is advisable to cover the beds lightly after planting with long litter or cut evergreen branches until the plants are well in leaf, and danger from severe frosts is past. In April and May, during dry weather, water the beds freely, two or three times a week if necessary, and when the flower buds appear water daily if required. *The Spring plantings are best made in semi-shady situations. The roots should be steeped in water, for 6 hours, before planting.*

BARR'S DOUBLE POPPY ANEMONES. The flowers resemble semi-double Hollyhocks, and are very handsome. Planted from January to April, they flower in succession from April to July.

ANEMONE FULGENS.

Anemone Fulgens.

Anemone fulgens, with its rich *dazzling scarlet* flowers, and light elegant growth, is the most brilliant and graceful of all Winter and Spring-flowering Anemones. It is invaluable for table bouquets or vases, as it lasts a long time in water. This brilliant flower should be used largely in wild gardens, orchards, woodlands, on half-shady banks, &c. *Steep the roots 6 hours in water before planting.*

BARR'S BEAUTIFUL LARGE-FLOWERED GLADIOLI.

GLADIOLI rank amongst our most decorative and handsome of late summer and autumn flowers, and should be given a place in every garden. Their grand spikes of bloom are greatly valued for vases, lasting as they do a long time in water, and mixing well with the choicest of flowers.

A GROUP OF BARR'S GLADIOLUS GANDAVENSIS.

A FEW NOTES ON GLADIOLUS CULTURE, &c.

TIME OF PLANTING.—This is dependent greatly on season and locality. As a rule, planting may commence end of March, and be continued to early in June.

SOIL AND SITUATION.—The Gladiolus loves a deep, rich, well-drained soil, and a sunny situation. The ground should be prepared some time previous to planting by deeply trenching, and mixing in an abundance of old decayed manure. Plant four inches deep, and surround the bulb with mixed sand and charcoal or wood ashes. This little extra trouble is well repaid by a strong healthy growth. The bulbs should be planted nine inches apart.

AFTER-MANAGEMENT.—As soon as the plants are sufficiently advanced to require support, each should have a stout stake, and at this period a top dressing of partly decayed manure should be given to aid growth, and to prevent undue evaporation of moisture from the soil. *During dry weather give liberal waterings.*

PLANTING TO ADVANTAGE.—Gladioli are most effective when planted in clumps of three to twelve; for a bold handsome effect plant in groups of fifty, a hundred, or more. In Rhododendron beds and amongst shrubs they are exceedingly effective, especially when associated with **Lilies, Cannas, Tritomas, Hyacinthus candicans, Plantain Lilies, &c.**

CULTURE IN POTS.—Potting may be done from February, one bulb in a 6-inch pot, or three bulbs in an 8-inch pot, using a mixture of good rich soil; care should be taken that the drainage is perfect. Plunge the pots in ashes in a cold, airy frame, or a sheltered corner of the garden, on a hard surface so that no earthworms can enter the pots, and when the flower spikes are somewhat advanced remove to the greenhouse. When in full growth give abundance of water during dry weather, and, when blooms are showing, a little manure water.

LARGE-FLOWERED GLADIOLUS GANDAVENSIS.

NEW HYBRID BUTTERFLY GLADIOLI.

Lemoine's beautiful Hybrids of G. purpureo-auratus and the best of the G. Gandavensis varieties.

A handsome race of Gladioli, distinct in form and markings from the varieties of **Gandavensis**; the colours are beautiful, and the large blotches on the lower petals strikingly attractive. They are hardy vigorous growers, and bloom during the interval between the early and late-flowering Gladioli. *The Varieties offered below are some of the finest.*

GLADIOLUS NANCEIANUS.

NEW GIANT-FLOWERED.

Lemoine's Hybrids of G. Saundersii and the best varieties of G. Gandavensis.

Lemoine's newest race of magnificent Gladioli, surpassing all others in the enormous size of their large open flowers, which are freely produced on erect branching sturdy spikes. In outline the flowers are elegant, while their colours are very brilliant, with beautiful spottings and markings; they are hardy vigorous growers, and remarkably floriferous.

The varieties offered below are a few of the best.

☞ The numbers (1), (2), (3), (4) following the name indicate the relative time of flowering; thus those marked (1) bloom first, while those marked (4) are the latest to open their flowers.

BEAUTIFUL LILIES FOR SPRING PLANTING.

FOR BEDS AND BORDERS, ALSO FOR GREENHOUSE DECORATION.

THE LILY, for variety of colour, chasteness, and beauty of form, is matchless amongst hardy plants. The flowering commences in May, and a continuous unbroken succession of bloom, from species of different countries, is maintained till the frosts of autumn destroy the last unexpanded flower buds.

CULTURE OUT-OF-DOORS.—In choosing a situation for planting, *perfect drainage*, natural or artificial, should be the first consideration. The borders of Rhododendron and Azalea beds, and such like positions, are generally suitable for Lily culture, as the necessary compost for the particular species can easily be given, and the shelter from the surrounding branches is beneficial in protecting the plants from cold winds in spring, and also affording a partial shelter from the sun's rays in summer. Sheltered spots in mixed herbaceous and shrubbery borders will also do. In preparing the ground, loosen the soil to a depth of several feet, and add fresh loam, coarse sand, and *sweet* decomposed leaf soil, or good peat, care being taken that the *soils are as free as possible from insect life*, and the compost sufficiently friable. Plant the bulbs 4 to 6 inches deep (except where otherwise stated), and they may then remain undisturbed for many years. The bog or swamp-loving Lilies **Superbum,** and the varieties of **Canadense** and **Pardalinum,** prefer a rather moist peaty or retentive loamy soil and rather shady situation; they are admirably adapted for growing amongst Rhododendrons and Azaleas, and for the sides of brooks, ponds, rivulets, &c.; they are also charming naturalized in Grass.

CULTURE IN-DOORS.—**THE LILY** being a free rooter requires plenty of pot room, therefore use in most cases a 6 or 8-inch pot for one bulb, according to its size, and a compost of fibrous loam and sweet decomposed leaf soil, with plenty of coarse sand or good peat; or loam and sand will do. *See that the drainage is perfect and the inside of the pot clean, to start with.* Pot firmly, barely covering the top of the bulb, and leaving room to add more soil when the surface roots appear. Select a situation out-of-doors, protected from the afternoon sun, and stand the pots on a bed of ashes raised above the general level to avoid stagnant moisture, and made firm to prevent the entrance of worms; then cover with six inches of cocoa-nut fibre or old leaf soil to keep off excessive rains. When top growth begins to show above the covering, remove the pots to a cold frame, pit, or greenhouse, and start giving water sparingly; a little *clear weak liquid manure given twice a week*, when the flower buds are well advanced, will greatly assist in the development of fine blooms. A north wall or hedge is a suitable situation for starting the bulbs. If very early flowers are required the Lily may be started in a *gentle* heat as soon as potted, but as soon as top growth shows itself the plant must be kept as near the glass as possible to prevent being drawn. **Superbum** and the varieties of **Canadense** and **Pardalinum** prefer for soil a moist sandy peat, but will also thrive in any good fairly moist soil.

☞ To those desiring further information regarding **Lilies,** we recommend Dr. Wallace's **'Notes on Lilies,'** price 5*s.*

BEAUTIFUL LILIES FOR SPRING PLANTING—*continued.*

LILIUM AURATUM.

Auratum (the White Golden-rayed Crimson-spotted Hill Lily of Japan), this is, indeed, the **Queen of Lilies,** and should have a place in every garden and greenhouse. It is of simplest culture and perfectly hardy. Those who have beds of Rhododendrons should plant this grand Lily freely amongst them for a succession of flowers. Growing amongst Pæonies, and along the margins of evergreens, clumps of **L. auratum** (six to twelve bulbs in a clump, planted three to six inches apart), produce a grand effect. As isolated subjects on large lawns, groups of **Lilium auratum** look very handsome and stately. A situation should be chosen where the plants are sheltered from cutting winds and screened from the mid-day sun.

Splendid Large Bulbs, producing an abundance of flowers, 12 for 10*s.* 6*d.*, 25 for 20*s.*, 50 for 38*s.*, 100 for 70*s.*

Good-sized Bulbs, producing numerous flowers, 12 for 7*s.* 6*d.*, 25 for 14*s.*, 50 for 26*s.*, 100 for 50*s.*

Smaller Bulbs, but of good flowering size, 12 for 5*s.* 6*d.*, 25 for 10*s.*, 50 for 19*s.*, 100 for 36*s.*

A few Special Monster Bulbs, 1*s.* 6*d.* & 2*s.* each.

	each *s.*	*d.*
Auratum var. Alexandræ, a very distinct and beautiful new *white* Lily from Uke Island, discovered 1893	7	6
,, **Beauty of Japan (new),** a splendid new variety of *L. auratum platyphyllum* type, its grand large flowers being very broadly banded with *glowing dark crimson* down centre of petals; it is a stately Lily of great beauty and a fine acquisition	15	0
,, **pictum,** large white flowers beautifully spotted crimson, and petals tipped red, very showy, per doz. 25*s.*	2	6

Lily of the Valley. For Forcing and making Plantations out-of-doors.

The **Berlin Crowns** are extensively used for forcing by the growers for Covent Garden Market; of these, 15 to 20 may be planted in a 5-inch pot. For **Lily of the Valley beds,** also for massing in north borders, and to naturalise in woods, copses, &c., we recommend **Fortin's Giaut flowered,** the "**Alexandra**" strain, and the **Dutch.**

CULTURE INDOORS.—*A moist atmosphere, with a temperature of 80 to 85 degrees, and abundance of water* is necessary to success in forcing Lily of the Valley; to encourage simultaneously the development of flower and foliage, place the pots in a shady damp part of the house, or invert a flower-pot over the crowns, till the flower and the foliage have made some progress, when remove to a less shady situation. If they are grown in a dry atmosphere, or get *an insufficient supply of water at the roots,* the crowns, technically speaking, go "blind."

BARR'S TURCO-PERSIAN RANUNCULI.

Ranunculus, Turco-Persian, Turban and Persian.

CULTURE.—Plant the **Turban** and **Turco-Persian Ranunculus** from October to March, and the **Persian** varieties from January to April in light richly manured soil. Select a dry day for planting and draw drills two inches deep and five or six inches apart; at the bottom of the drill sprinkle a little sand, press the tubers firmly into the soil, *claws downwards*, and cover them with sand, then with soil, keeping the crown of the tuber two inches under the surface. Cover the early plantings with *long straw, cut heather, or other light material*, which remove in spring when danger of severe frosts is gone. In April and May, during dry weather, water the beds freely, two or three times a week, if necessary, and when the flower-buds appear, water daily if required, and continue doing so while the plants are blooming; this will ensure fine flowers. *In watering, wet the foliage as little as possible.* While in growth the plants must be protected from cutting winds, and this can be managed by sticking in the bed cut evergreen branches. If grown as pot-plants put three tubers in a 4-inch pot and plunge out of doors until well rooted.

Ranunculus, Barr's Giant Turco-Persian, for Bedding.

This new race of Ranunculus is remarkable for a vigorous growth and profuse flowering. The blooms are large and very handsome, in great diversity of colour. When massed in flower beds and borders they produce a glorious effect. For cutting they are most valuable, and flowers may be gathered from the same bed several times a week, during the flowering period, without impairing the display.

Ranunculus, Double Turban or Turkish, for Bedding.

The flowers of the **Turban Ranunculus** differ from the Persian in being larger, more rose-like, and self-coloured. In beds, ribbons, and masses in the borders, the rich *yellow*, bright *orange*, brilliant *scarlet*, beautiful *rose-carmine*, and pure *white* flowers are very effective in Spring.

Tigridia pavonia (Tiger-spotted Flower).

TIGRIDIA GRANDIFLORA RUBRA.

No flower is more gorgeously coloured or more beautiful. **The bulbs** can be planted out-doors March, April, or May in a sunny situation; but for indoor decoration pot up as soon as bulbs are received and plunge in a cold frame, withholding water till the foliage appears, and then giving sparingly at first. Those bulbs intended for out-doors should be stored in dry soil or sand, away from frost till time for planting. (*Beautiful Coloured Plate* of **T. alba**, price 6*d.*)

Tropæolum tuberosum, a very showy twiner, growing 3 to 4 ft. high, and producing in autumn a profusion of *red and yellow* flowers; a pretty subject for trailing over trellises, old tree-stumps, &c.; *plant out in March and April, selecting an open sunny situation and a light sandy soil; until planting time store the tubers in sand away from frost*...per doz. 3*s.* 6*d.*	0 4
Tuberose. This valuable sweet-scented flower is too well known to need description. For early flowering pot the bulbs as soon as received, and plunge the pots in a temperature of 60 to 70 degrees. The bulbs for succession keep dry, or pot at once to make root growth; in either case the temperature should not be below 50 degrees or the bulbs will suffer. For out-door decoration start the bulbs in a cold frame or in gentle heat, and plant out end of May. **Double American Dwarf, "Excelsior Pearl"**; comparatively dwarf, with *pure white* double flowers.....**strong forcing roots,** *specially selected*, per 100, 15*s.*; per dozen 2*s.* 6*d.*	0 3

"PHYTOBROMA,"

BARR'S NEW PLANT FOOD.

The best Manure for Flowers, Vegetables, Fruit, Cereal and Root Crops, and for Lawns.

PHYTOBROMA we can confidently recommend to our Customers as a valuable food for all kinds of plants, being rich in those chemical properties essential to the health and productiveness of vegetable life. It contains a large percentage of phosphates and potash salts in a form acting directly on the roots of a plant. It is cleanly to handle and without offensive odour.

PHYTOBROMA secures to **Vegetable, Fruit, Cereal,** and **Field Root Crops** a strong healthy growth, and consequently an increased and superior crop. In the culture of **Flowering Plants** its use produces a greater profusion of bloom, increased size of flower, and richness of colour.

Exhibitors at Flower Shows will find this a valuable **Manure.**

For the improvement of **Grass Lawns, Tennis Courts, Cricket Grounds, PHYTOBROMA** can be strongly recommended, its use soon producing a thicker growth and richer colour.

Full particulars, with directions for use, on application.
